Scope of work

The service provider will conduct a thorough site inspection and assessment to evaluate the existing CCTV system's condition and identify any issues that need to be addressed.
The service provider will install and configure the new 32-channel DVR, integrate it with the existing CCTV system, install and connect it to a 55-inch TV for monitoring.
The service provider will also install seven new additional cameras, route cables, mount hardware, and perform cable management. The materials and equipment needed for this upgrade will be provided by the service provider.
Once the installation is complete, the service provider will conduct testing and commissioning to ensure that the upgraded CCTV system is fully functional and the supplier will issue a certificate of completion. Additionally, the service provider will provide training to the ICT unit on how to operate and manage the upgraded CCTV system.
The service provider will also provide after-service support for the newly upgraded CCTV system. This includes troubleshooting and the repair or replacement of under-warranty cameras, DVRs, and monitors for a minimum period of one year. Any materials and spare parts required for these repairs will be provided by the service provider.
